"Molecular cloning of murine Toll-Like-Receptor 7.";

"Molecular cloning of murine Toll-Like-Receptor 7.";

Submitted (MAX-2001) to the EMBL/GenBank/DDBJ databases.

-1- FUNCTION: Participates in the innate immune response to microbial agents. Acts via MyDBB and TRRFG, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response (By similarity).

-1- SUBMITT: Binds MyDBB via their respective TIR domains (By similarity).

-1- SUBMITT: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

-1- SIMILARITY: CONTAINS 1 TIR DOMAIN.

-1- SIMILARITY: CONTAINS 28 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (POTENTIAL)

       POLYMORPHISM: POSITION 161 IS ASSOCIATED WITH PLATELET-SPECIFIC ALLOANTIGEN SIBA. 51BA(-) HAS THR-161 AND SIRA(+) HAS MET-161.

SIBA IS INVOLVED IN NEONATAL ALLOIMMUNE THROMBOCYTOPENIA (NATP).

DISEASE: DEFECTS IN GPIBA ARE ONE OF THE CAUSES OF BERNARD-SOULIER SYNDROME (BSS). BSS PATIENTS HAVE UNUSUALLY LARGE PLATELETS AND DISEASE: DEFECTS IN GPIBA ARE ONE OF THE CAUSES OF BERNARD-SOULIER DISEASE: DEFECTS IN GPIBA ARE ONE OF THE CAUSES OF VON WILLEBRAND DISEASE: DEFECTS IN GPIBA ARE ONE OF THE CAUSES OF VON WILLEBRAND DISEASE. DESUDO-VON WILLEBRAND DISEASE. THIS AUTOSOMAL DOMINANT BLEEDING DISCABLE IN GRADE AND INCREASED AFFINITY OF GP-1B FOR SOLUBLE VWF RESULTING IN IMPAIRED HEMOSTATIC FUNCTION DUE TO THE REMOVAL
                                                                                                                                       MISCELLANEOUS: PLATELET ACTIVATION APPARENTLY INVOLVES DISRUPTION OF THE MACROMOLECULAR COMPLEX OF GP-IB WITH THE PLATELET GIXCORPOTEN IX (GP-IX) AND DISSOCIATION OF GP-IB FROM THE ACTIN-BINDING PROTEIN.

MISCELLANEOUS: BINDING STES FOR VON WILLEBRAND FACTOR AND THROMBIN (THE LATTER SITE WITH UNKNOWN FUNCTION) ARE IN THE AMINO-TERMINAL PART OF THE MOLECULE.

SIMILARITY: CONTAINS 6 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SWART; SM00370; LRR; 3.

"Phylogenetic variation and polymorphism at the Toll-like receptor 4
"loca's (TARA).";

"In Carone Biol. 1: RESEARCH002.1-2.10(2000).

"In FUNCTION: Cooperates with MD-2 and CD14 to mediate the innate immune response to bacterial lipopolysaccharide (LPS). Acts via MyD88 TIRAP and TRAFF, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response (By similarity).

"In Subjurity Belongs to the lipopolysaccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLR4.

Binds MD-2 via the extracellular domain. Binds MyD88 and TIRAP via their respective TIR domains (By similarity).

"SUBJURITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

"In SIMILARITY: CONTAINS 1 TIR DOMAIN.

"MD-2 and TLR4 N-linked glycosylations are important for a functional lipopolysaccharide receptor.";
J. Biol. Chem. 277:1845-1846/12002).
-!- FUNCTION: Cooperates with MD-2 and CD14 to mediate the innate immune response to bacterial lipopolysaccharide (LPS). Acts via MyD88, TIRAP and TRAF6, leading to NF kappa-B activation, cytokine secretion and the inflammatory response.
-!- SUBUNIT: Belongs to the lipopolysaccharide (LPS) receptor, a multi-protein complex containing at least CD14, MD-2 and TLR4.
Binds MD-2 via the extracellular domain. Binds MyD88 and TIRAP via their respective TIR domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ç

TISSUE SPECIFICITY: Highly expressed in placenta, spleen and peripheral blood leukocytes. Detected in monocytes, macrophages, dendritic cells and several types of T-cells.

PTM: N-glycosylated. Glycosylation of Asn-556 and Asn-575 seems to be necessary for the expression of TLR4 on the cell surface and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Smirnova I., Poltorak A., Chan E.K.L., McBride C., Beutler B.; "Phylogenetic variation and polymorphism at the Toll-like receptor 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PUNCTION: Participates in the innate immune response to Grampositive bacteria and fungi. Acts via MyD88 and TRAF6, leading to NF kappa B activation, cytokine secretion and the inflammatory response. Recognizes mycoplasmal macrophage-activating lipopeptide-2kD (MALP-2), soluble tuberculosis factor (STF), phenol soluble medulin (PSM) and B.burgdorferi outer surface protein A lipoprotein (OspA-L) cooperatively with TLR2. SUBBUNIT: Binds TLR2 via their respective extracellular domains. Binds MyD88 via their respective TIR domains (By similarity). SUBCELULAR LOCATION: Type I membrane protein. Plasma membrane and TISSUE SPECIFICITY: Detected in monocytes, CDIIc+ immature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ρλ

-1- FUNCTION: TRANSCRIPTIONAL REPRESSOR FOR THE ARS OPERON. ARSR IS
A TRANS-ACTING REGULANORY PROTEIN WHICH COMPROLS ITS OWN
EXPRESSION. THE REPRESSIVE EFFECT OF ARSR IS ALLEVIATED BY OXYIONS
OF +III OXIDATION STATE OF ARSENIC, ANTIMONY, AND BISMUTH, AS WELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

-!- FUNCTION: ESSENTIAL FOR EFFICIENT PROCESSING OF 16S RRNA. PROBABLY
PART OF THE 30S SUBUNIT PRIOR TO OR DURING THE FINAL STEP IN THE
ROCESSING OF 16S FREE 30S RIBOSOMAL SUBUNITS. IT COULD BE SOME
ACCESSORY FOOTEIN NEEDED FOR EFFICIENT ASSEMBLY OF THE 30S
SUBUNIT. RIMM IS NEEDED IN A STEP PRIOR TO RBFA DURING THE
MATURATION OF 16S RRNA. HAS AFFINITY FOR FREE RIBOSOMAL 30S
                                                                                                                                                                                                                                                                                            "DNA sequence, structure and gene expression of mycobacteriophage L5:
a phage system for mycobacterial genetics.";
Mol. Microbiol. 7:395-405(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Nucleic Acids Res. 24:4420-4449(1996).
-!- CATALTIC ACTIVITY: 2-deoxy-D-ribose 5-phosphate = D-glyceraldehyde 3-phosphate + acetaldehyde.
-!- PATHWAY: NUCLEOTIDE AND DEOXYRIBONUCLEOTIDE CATABOLISM.
-!- SUBCELLULAR LOCATION: CYLOplasmic.
-!- SIMILARITY: BELONGS TO THE DEOC/FBAB FAMILY OF ALDOLASES.
DEOC SUBFAMILY.

BLOL. Chem. 269:683-690(1994).

-I- FUNCTION: RECOGNIZES THE DOUBLE STRANDED SEQUENCE 5'-CGAN(6)TGC-3'
AND CLEAVES BILATERALLY AND SYMMETRICALLY OUTSIDE THE SEQUENCE TO
RELEASE A 34-BASE PAIR FRAGMENT. METHYLATION OF THE RECOGNITION
SEQUENCE OCCURS ON THE ADENINE IN EITHER ONE OR BOTH STRANDS.
-I- COFACTOR: MAGNESIUM.
-I- SUBUNIT: HETEROTERMER OF TWO ALPHA AND ONE BETA SUBUNIT. BOTH
SUBUNITS ARE NECESSARY FOR DNA-BINDING.
                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

Patent No. 5705609
GENERAL INFORMATION:
APPLICANT: RUOSCHHATI, ERKKI I.
APPLICANT: CARDENAS, JOSE
APPLICANT: CARDENAS, JOSE
APPLICANT: CRAIG, WILLIAM
APPLICANT: MULLEN, DANIEL G.
TITLE OF INVENTION: DECORIN FRAGMENTS AND METHODS OF
TITLE OF INVENTION: INHIBITING CELL REGULATORY FACTORS
                    COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette-5.25 inch, 1.2 Mb
COMPUTER: AST Bravo IBM PC comp. (386SX)
COMPUTER: AST Bravo IBM PC comp. (386SX)
OPERATING SYSTEM: MS DOS version 3.2
SOFTWARE: WordPerfect 5.1 conv. to ASCII
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/613,083B
FILING DATE: 19911114
CLASSIFICATION: 435
PRIOR APPLICATION NUMBER: US. 07/470,674
FILING DATE: 04-Jan.1990
ATTORNEY/AGENT INFORMATION:
